

American Craftsman Restoration

Hospital Grade Disinfection of Commercial & Residential Spaces

Overview:

Property was inspected on 8/27/16 for damage caused by an outbreak of Hand Foot and Mouth Disease at an elementary school. School had reported multiple children of contracting the Hand Foot and Mouth Disease and was in jeopardy of having to shut down the school. The CDC states the illness is very contagious and spreads quickly at schools and day care centers.

American Craftsman was called in over the weekend due to the cutting-edge technology of **SteraMist** and its rapid response capabilities at wiping out diseases quickly. **SteraMist** powered by Binary Ionization Technology (BIT) provides fast acting biological kill and inactivation of harmful microorganisms, including those hard to kill MDRO's such as C.diff spores, MRSA, and the inactivation of Norovirus and influenza flu virus. All of the school was treated over the weekend with kids being able to return school on Monday morning. School was able to remain open and ensure kids health was protected due the capabilities of **American Craftsman**.
